Task 1: Fix click detection

Prompt: Pasted the game code and README, asked for help with Task 1. **LLM suggestion:** Compare squared distance to radius * radius; check balloons in reverse so the top one pops. **My review:** Tested edge clicks in the game; they now register.

Task 2: Balloon types

Prompt: Asked for normal, bonus and penalty balloons with different colors and points. **LLM suggestion:** BALLOON_TYPES table with weighted random spawning; kind and points on Balloon. **My review:** Tested that gold gives +30 and purple gives -20.

Task 3: Lives

Prompt: Asked for 3 lives that drop only when a balloon falls past the bottom. **LLM suggestion:** Count missed balloons in update(); end the game at 0 lives. **My review:** Confirmed popping never costs a life.

Task 4: Timed round

Prompt: Asked for a 30-second countdown, final score screen and restart. **LLM suggestion:** Frame-based timer, draw_game_over(), press R to reset. **My review:** Confirmed the round ends at 0 seconds or 0 lives, and R resets everything.
